

One-piece Heli Portable Aluminum Shack

Keep your crew safe from the elements and speed up drill moves with our Fly-One-Piece Aluminum drill shack. It has certified lifting points, access doors to service vital components and even a AVD rod handling system option.

Modular Base Frame Design

A solid base for you heli shack and a place to integrate a rod handling system only happens with our engineered base. Deep holes on a heli-portable job are much easier with this system.

Heli Portable Rod Handling System

With the same great rod handling system as on our shacks, we've made the AVD rod handling system heli-portable. This ties in with our engineered base to keep rod pulls fast and safe.

Mud Tank Design

Single and dual mud tanks systems are available. From simple polymer mixing to bentonite we have your mud tank needs covered.

Integrated Drill Mounts And Drip Tray

No drill skids on required with the FX-10 integrated system. Drilling can occur in environmentally sensitive areas, having a drip tray to mitigate spill is good business practice.

STRATEGIC ACCESS POINTS

Checking fluid levels and daily inspections can easily be carried out with well-placed access doors. We even put a window on the drillers access door to help keep an eye on the site.

Specifications

GUARDING

- Standard X-10 rod string cage guarding with interlock system

FUEL CAPACITY

- 500L Double walled certified fly fuel system

ROD CAPACITY

- 1600m of NQ in 9m lengths

WEIGHT

- Ability to be broken down into 2200 lb. picks

DIMENSIONS

- Shipping = Breaks down into small lifts for easy transportation
- Operational = 18' long x 16' wide x 9' tall

MUD SYSTEM

- Fly certified dual mud tank system with slide in mixer and integrated pump mount
