# TX-10 Track Drill

### **Removable Undercarriage**

The TX-10 undercarriage will work as a rod sloop or the platform for the X-10 Surface diamond drill. This helps to keep spare parts the same and inter-changeability between equipment. Another advantage to integration and the TactEx proprietary platforms.

### **308 STEEL CAT TRACKS**

Cat tracks have been doing low ground pressure systems for a long time and doing it right. There was only one choice for TX-10. Having the ability to weld on ice lugs and caterpillar support globally will keep this track drill moving anywhere, anytime of the year.

### **Remote Control Hydraulic Operation**

Keep your crew safe while transiting from drill site to drill site. Remote operation allows for better awareness and eliminates the extra size and cost of ROPS systems on the drill.

### **Leveling Cylinders**

Drill sites are seldom flat, these rams make leveling the TX-10 much faster and safer. Telescoping out with 36" of travel makes the terrain much easier to work on.

## Drop Down Walkways

Having accessibility to all areas of the TX-10 while conducting drilling operations is easily achieved on the fold down walkways. This also allows for a smaller footprint while transiting or loading into a seacan.

## Hydraulic Recovery Winch

Sometimes you need a little extra pull when the terrain gets soft or steep. The TX-10 has an optional 20,000Lbs hydraulic winch to get past these obstacles.

Add a couple pulleys to this system and recovery becomes even easier.

## Specifications

### TRACKS

- CAT 308 Steel track system

### WEIGHT

- 20,000 lbs. over all weight

### DIMENSIONS

- Shipping = 92" wide x 180" long x 101" tall
- Operational = 155" wide x 218" long x 120" tall

### REMOTE CONTROL SYSTEM

- 12v Wireless remote for electric over hydraulic function

### FUEL TANK AND MUD TANK CAPACITY

- 250 liter double walled fuel tank
- 500 Liter single mud tank systems with slide in mixer
